MAINTENANCE MANUAL
YAMADA AIR-OPERATED DIAPHRAGM PUMPS

DP-10 series
For your own safety, be sure to read procedures carefully before performing maintenance on this product. After reading this document, be sure to keep it handy for future reference.

This maintenance manual covers what you should know about maintenance of the Yamada DP-10 series Diaphragm Pumps.

This edition is based on the standards for the March 2010 production run. Remember, the specifications are always subject to change; therefore, some of the information in this edition may not apply to new specifications.

• Warnings and Cautions

For safe use of this product, be sure to note the following: In this document, warnings and cautions are indicated by symbols. These symbols are for those who will operate this product and for those who will be nearby, for safe operation and for prevention of personal injury and property damage. The following warning and caution symbols have the meanings described below. Be sure to remember their meanings.

⚠️ WARNING :  If you ignore the warning described and operate the product in an improper manner, there is danger of serious bodily injury or death.

⚠️ CAUTION :  If you ignore the caution described and operate the product in an improper manner, there is danger of personal injury or property damage.

Furthermore, to indicate the type of danger and damage, the following symbols are also used along with those mentioned above:

🚫 This symbol indicates a DON'T, and will be accompanied by an explanation on something you must not do.

⚠️ This symbol indicates a DO, and will be accompanied by instructions on something you must do in a certain situation.

⚠️ WARNING

- Before starting maintenance work, cut off the feed air and clean the pump. If air pressure or residue remain in the pump, there is danger of explosion, or possible poisoning resulting in serious injury or death if chemicals adhere to the skin or are accidentally swallowed. (For details on cleaning the pump, refer to Chapter 6 of the operating manual.)
- When replacing parts, be sure to use the recommended genuine parts or Equivalents. Use of other parts may cause a malfunction of the product. (Refer to Exploded View and Reminder to order correct item on the separate sheets.)

⚠️ CAUTION

- When it is instructed that special tools must be used, be sure to use the specified tools. Otherwise, the pump may be damaged.
- Refer to 10.1 "Specifications" in the Operating Manual. Also, remember that the pump is heavy, and extreme care must be taken when lifting it.

1. Principles of operation
There are two diaphragms fixed to the center rod, one at each end. When compressed air is supplied to air chamber b (right side, see Fig.1.1), the center rod moves to the right, the material in material chamber B is pushed out, and at the same time material is sucked into material chamber A.
When the center rod is moved full-stroke to the right, the air switch valve is switched, compressed air is sent to air chamber a (left side, see Fig.1.2), and the center rod moves to the left. The material in material chamber A is pushed out, and at the same time material is sucked into material chamber B.
Through repetition of this operation, material is repeatedly taken in and discharged out.

2. Tools, etc.
2.1 General tools
- Socket wrenches 13mm
- Hexagonal box wrenches 5mm, 6mm
- Open-end wrenches 21mm (BP_)
- Snap ring pliers

2.2 Misc.
- Assembly oil  Turbine oil none addition class 1(equivalent to ISO VG32 grade)
- Nuts M8×1.25 (BA_, BS_)
- Grease Urea grease grade (NLGI) No.2

3. Ordering Replacement parts
For accurate and speedy shipment of parts, be sure to order the right parts for your model to distributor. Indicate the part numbers, descriptions, and quantities.
4. Balls and Valve seats
4.1 Removal
■ BA_, BS_ types

- Remove the 4 retainer bolts from the out manifold, and remove the out manifold. [Fig.4.1]

- Remove the O ring, valve stopper, ball and valve seat. [Fig.4.2]

- Turn over the main body assembly. [Fig.4.3]
  Remove the 4 retainer bolts from the in manifold, and remove the in manifold. [Fig.4.3]

- Remove the O ring, valve seat, ball and valve stopper. [Fig.4.4]

■ BP_ type

- Remove the 4 retainer nuts from the out manifold, and remove the out manifold. [Fig.4.5]
• Remove the O ring, valve stopper, ball and valve seat. [Fig.4.6]

• Turn over the main body assembly. [Fig.4.7]
Remove the 4 retainer nuts from the in manifold, and remove the in manifold. [Fig.4.7]

• Remove the O ring (excluded BPC, BPN), ball and valve seat. [Fig.4.8]

4.2 Inspection

• Ball [Fig.4.9]
Measure the outside diameter, and if it is outside the usable range, replace the ball.

```
Usable range of ball
\( \phi 0.563 \sim \phi 0.642 \text{ in} \{\phi 14.3 \sim \phi 16.3 \text{ mm}\}
```

• Valve seat [Fig.4.10]
Measure the dimension shown at left, and if it is outside the usable range, replace the seat.

```
Usable range of valve seat

<table>
<thead>
<tr>
<th>BA_, BS_ BPH, BPT, BPS</th>
<th>0.079 \sim 0.201 \text{ in} {2.0 \sim 5.1 \text{ mm}}</th>
</tr>
</thead>
<tbody>
<tr>
<td>BPC, BPN</td>
<td>0.079 \sim 0.264 \text{ in} {2.0 \sim 6.7 \text{ mm}}</td>
</tr>
</tbody>
</table>
```

• O ring (other than PTFE)
If O ring is worn out or cracked, replace it.

4.3 Installation
For installation, see [Exploded View] on the separate sheet and install in the reverse order of disassembly.

Tightening torque for manifold retainer bolts

```
\begin{tabular}{l|c}
| BA_, BS_ | 105 \text{ in-lbf \{12 N-m\}} |
| BP_       | 70 \text{ in-lbf \{8 N-m\}}   |
\end{tabular}
```

<NOTE>
• Make sure there is no dust on the seal surface and the seal is not damaged.
• Replace the PTFE O ring regardless of its condition.
5. Diaphragm
5.1 Removal
■ BA_, BS_ types

- Remove the ball and valve seat etc. (see [4.1 Removal BA_, BS_ types] on P.4)
- Remove the 12 retainer bolts from the out chamber, and remove the out chamber. [Fig.5.1]

- Remove the nuts on both sides of the center rod. [Fig.5.2]
- After the nuts on one side have been removed, remove the center disk and diaphragm. [Fig.5.2]

- Remove the nuts on the opposite side using the double nut. [Fig.5.3]
- Remove the coned disk spring, center disk and diaphragm.

■ BP_ type

- Remove the ball and valve seat etc. (see [4.1 Removal BP_ type] on P.2)
- Remove the 12 retainer bolts from the out chamber, and remove the out chamber. [Fig.5.4]

- Remove the center disk from one side. [Fig.5.5]
- After the center disk (outside) has been removed, remove the diaphragm and the center disk (inside).
5.2 Inspection

- Remove the center disk and diaphragm from the opposite side using the double nut. [Fig.5.6]
  Be careful not to scratch or score the center rod.

- Diaphragm
  If the diaphragm is worn out or damaged, replace it.
  New replace just one diaphragm.

Guideline of diaphragm life

<table>
<thead>
<tr>
<th>Material</th>
<th>Life Cycle</th>
</tr>
</thead>
<tbody>
<tr>
<td>CR, NBR, PTFE</td>
<td>10,000,000 cycle</td>
</tr>
<tr>
<td>TPEE, TPO</td>
<td>15,000,000 cycle</td>
</tr>
</tbody>
</table>

(When used with clean water at room temperature)

5.3 Installation

■ B_H, B_S types

For installation, see [Exploded View] on the separate sheet and install in the reverse order of disassembly.

- Apply assembly grease to the center rod, and insert it into the main body.
- Keep the convex side to the outside (cf. Fig.5.7).
- Tighten the center disk using the open-end wrenches for BP type. (No coned disk springs and nuts are needed.)
- Tighten the out chamber temporarily at first.
- After installation of the out chambers on both sides, place the pump on a flat surface and stand the pump upright for further assembly.

| Tightening torque for center rod and out chamber |
|----------------|----------------|
| Center rod      | 122 in-lbf (14 N-m) |
| Out chamber     | 105 in-lbf (12 N-m) |

<NOTE>

- Make sure there is no dust on the seal surface in order to prevent seal damaged.
- Tighten the bolts gradually in a diagonal sequence with even torque. [Fig.5.8].

■ B_C, B_N, B_T types

For installation, see [Exploded View] on the separate sheet and install in the reverse order of disassembly.

- Apply assembly grease to the center rod, and insert it into the main body.
- Keep the marking “LIQUID” to liquid end for CR, NBR diaphragms.
- Keep the convex side to the outside for PTFE diaphragm.
- Install the O ring (cf. Fig.5.8).
- Tighten the center disk using the open-end wrenches for BP type.
  (No coned disk springs and nuts are needed.)
- After installation of the out chambers on both sides, place the pump on a flat surface and stand the pump upright for further assembly.

| Tightening torque for center rod and out chamber |
|----------------|----------------|
| Center rod      | 122 in-lbf (14 N-m) |
| Out chamber     | 105 in-lbf (12 N-m) |

<NOTE>

- Make sure there is no dust on the seal surface in order to prevent seal damaged.
- Replace the PTFE O ring by new one.
- Tighten the bolts gradually in a diagonal sequence with even torque. [Fig.5.10]
6. Center rod, Body and Guide bushing

6.1 Removal

- Remove the diaphragm etc. (see [5.1 Removal] on P.4)
- Remove the snap ring using the snap ring pliers, and remove the guide bushing, spacer and center rod assembly.

[Fig.6.1]

6.2 Inspection

- Center rod assembly [Fig.6.2]
  Measure the outside diameter (A), and if it is outside the usable range, replace the slipper seal.
  
  Usable range of Slipper seal (A)
  \[ \phi0.783 \sim \phi0.787 \text{ in} \{ \phi19.9 \sim \phi20.0 \text{ mm} \} \]

  Measure the outside diameter (B), and if it is outside the usable range, replace the center rod Slipper seal.

  Usable range of Center rod(B)
  \[ \phi0.547 \sim \phi0.551 \text{ in} \{ \phi13.9 \sim \phi14.0 \text{ mm} \} \]

- Sleeve [Fig.6.3]
  Measure the inside diameter, and if it is outside the usable range, replace the Sleeve.
  Remove the Sleeve from the Spacer side.

  Usable range of sleeve
  \[ \phi0.7874 \sim \phi0.7906 \text{ in} \{ \phi20.00 \sim \phi20.08 \text{ mm} \} \]

- Guide bushing [Fig.6.4]
  Measure the inside diameter, and if it is outside the usable range, replace the guide bushing.

  Usable range of Guide bushing
  \[ \phi0.5520 \sim \phi0.5544 \text{ in} \{ \phi14.02 \sim \phi14.08 \text{ mm} \} \]

- O ring
  If the O ring is worn out or cracked, replace it.

6.3 Installation

For installation, see [Exploded View] on the separate sheet and install in the reverse order of disassembly.

<NOTE>
- Make sure there is no dust on the seal surface and it is not damaged.
- Apply grease to packing.
7. Spool valve case and Spool Assembly

7.1 Removal

- Remove the 2 retainer from the spool valve case, and remove the spool valve case. [Fig.7.1]

- Remove the 2 retainer bolts from the cap, and remove the reinforcement plate A, cap and reset button. [Fig.7.2]

- Remove the 2 retainer bolts from the cap, and remove the reinforcement plate B, and cap. [Fig.7.2]

- Remove the spool valve assembly from the spool valve case.

7.2 Inspection

- Spool valve assembly [Fig.7.3]
  Measure the outside diameter, and if it is outside the usable range, replace the slipper seal.

  | Usable range of spool valve assembly |
  | ø0.783 ~ ø0.787 in (ø19.9 ~ ø20.0 mm) |

- Spool valve case [Fig.7.4]
  Measure the inside diameter, and if it is outside the usable Range, replace the Spool valve case.

  | Usable range of spool valve case |
  | ø0.7874 ~ ø0.7906 in (ø20.00 ~ ø20.08 mm) |

7.3 Installation

For installation, see [Exploded View] on the separate sheet and install in the reverse order of disassembly.

- Tightening torque for installation Cap
  55 in-lbf (6 N-m)

- Tightening torque for installation Spool valve case
  55 in-lbf (6 N-m)

- Sleeve [Fig.7.5]
  When inserting the sleeve into the body, please make sure the position of the 3 holes in the sleeve match the corresponding holes in the body.

  <NOTE>
  - Make sure there is no dust on the seal surface and it is not damaged.
8. Retightening of Tie rods

■ Metal type

\[\text{Fig.8.1}\]

- All bolts should be retorqued:
  1. Right before start up.
  2. There are any leaks of material on daily inspecting a pump.

<table>
<thead>
<tr>
<th></th>
<th>Retain bolts for the out chamber</th>
<th>Retain bolts for the manifold</th>
</tr>
</thead>
<tbody>
<tr>
<td>DP-10</td>
<td>BA_ 12 N•m</td>
<td>BS_ 12 N•m</td>
</tr>
</tbody>
</table>

<NOTE>
- Retighten the Out chamber and then the manifold in this order. [Fig.8.1]
- Tighten the bolts in the order shown.

■ Plastic type

\[\text{Fig.8.2}\]

- All bolts should be retorqued:
  1. Right before start up.
  2. There are any leaks of material on daily inspecting a pump.

<table>
<thead>
<tr>
