

**5 Year Warranty:
Drive & Diaphragm**

Flow: Up to 21.1 GPH (80 LPH)

Pressure: Up to 362 PSIG (25 BAR)

Stepper Motor Diaphragm Pump

The NextStep in dosing solutions

NEXTSTEP

For water treaters who require a highly accurate, nearly constant chemical discharge in cooling towers or “once-through” processes where the even distribution of flow is beneficial.

- High turndown 3,333:1: Reducing pulsation.
- Liquid end construction: PVDF head with integrated bleed valve, double check valves.
- Slow Mode: Capacity control of 100% to 0.1%; Suction control from 100% to 30%, increases the reliability of metering off-gassing and high viscosity chemicals.
- Foot valve with integrated low tank level switch: Prevent your pump from running dry.
- Optional Remote Communication: Modbus, RS-485.
- Wide range of control modes: Stock one pump and solve for many different applications, or future changes in the application.
- Complete with everything for installation: NextStep includes foot valve strainer with integrated low tank level switch, all I/O cables, mounting screws, etc.

Pulsatron Series of pumps known for high reliability, easy maintenance, and lasting performance providing years of dependable service.

A Pulsatron pump for any Application
